

ITINERARY

**B**

8 DAYS / 7 NIGHTS  
Tuesday to Tuesday

ROUTE

Our 8-day eastern route visits some of the most popular landmarks of the Galapagos including the panoramic view of Bartolome, the amazing Witch Hill and the blowhole of Española. You will also get to snorkel in the most spectacular sites, amongst penguins, sea lions, turtles and more. As well as learning about the fascinating volcanic formations, you can spot endless wildlife including iguanas, booby colonies and albatrosses, and relax on striking coral sand beaches.

HIGH CHANCE OF SPOTTING:

## DAY 1 – TUESDAY

### AM – Arrival at Baltra Airport

Upon arrival at Seymour Ecological Airport, a check-up is carried out first, to ensure that no foreign plant or animal species are introduced on the islands. Furthermore, your TCC (Transit Control Card) is stamped; this must be kept safe during your trip, as it has to be presented again on your return flight. In addition, entrance to the Galapagos National Park is due for entry (US \$ 100), if this has not yet been paid. Your guide will meet you at the airport, assist you with the luggage and accompany you on the short bus ride. Here you will climb aboard the yacht Solaris. After greeting the crew and the captain, your cabins will be assigned to you and then you will enjoy your first lunch on-board.

### PM – Mosquera

Galapagos sea lions are true beach lovers and Mosquera offers beautiful white coral sand beaches, which contrast with the blue water and thus attract numerous sea lions. During a beach walk you can observe numerous species of waders and sanderlings. Between the rocks the red clip crabs wait to play hide and seek while you try to get the perfect photo. If you are lucky, you may even encounter yellow-crowned night-herons or even a red-footed booby.

## DAY 2 – WEDNESDAY

### AM – Darwin Bay (Genovesa)

Inside the submerged caldera of Genovesa lies Darwin Bay. The small-scaled area will surprise you as find yourself walking along a coral sand beach, crossing barren lava formations and creeks, passing tidal pools, shrubs and further ahead following the top of some cliffs. Every single species has occupied its own ecological niche. Whimbrels and wandering tattlers forage actively along the surf, next to resting Galapagos sea lions. Impressive frigatebirds and red-footed boobies nest in the mangroves, where you can also see vocalists such as the yellow warbler, Darwin's finches and the Galapagos mockingbird. Uniquely, two subpopulations of the same species of large cactus finch differ in their singing.

### PM: Prince Philip's Steps (Genovesa)

We will sail to nearby Prince Philip's Steps, close to the entrance of the broken caldera. Sometimes a Galapagos fur seal might be resting on one of the shaded ledges. Here you can snorkel once again, and then follow the guided trail through clifftop seabird colonies. At the seaside of the rim, the bushes open up and you can enjoy wide views and the strong sea breeze. Following the exposed rim you will first pass a colony of Nazca boobies and finally reach the extensive storm petrel nesting places, where if you are lucky you can see how the well-camouflaged short-eared owl hunts for them on foot!.

## DAY 3 – THURSDAY

### AM – South Plaza

You will enjoy an unforgettable guided walk on South Plaza, the best place to encounter endemic Galapagos land iguanas, patient and photogenic models. You can also look out for some of the unique hybrids between the male marine iguana and female land iguana. Arriving at the upper rim, about 20m/75ft downwards impressively droning waves splash against the foot of soaring cliffs. Clouds of petrels, storm petrels, shearwaters and brown noddies make spectacular flights and sometimes look like they're walking on the waves. Take your binoculars and don't miss the red-billed tropicbird with its graceful long tail and spectacular mating flights. These cliffs are also a nesting place for the endemic swallow-tailed gull.

### PM – Barrington Bay (Santa Fe)

You will land right in the middle of a Galapagos sea lion colony on the beach, where you will have time for a refreshing swim or excellent snorkelling among tropical reef fish in the crystal-clear azure waters of Barrington Bay. You will also encounter bizarre giant prickly pear cactus (opuntia) forests. These are the largest cacti on the islands, with extremely thick trunks, and can grow over 10m/33ft tall! We have a wet landing at the beach of Santa Fe where we have a guided nature walk. This extraordinary island is a remnant of probably the most ancient volcano on the Galapagos. Your guide will decide whether the easy shorter circuit is followed, or a strenuous longer hike land inward (moderate level; about 3km/2mi).

## DAY 4 – FRIDAY

### AM – Witch Hill (San Cristobal)

This morning we will get on the dinghy zodiac to explore the formidable cliffs of Witch Hill, carefully observing the marine life that feeds from the plankton that concentrates next to the rock. Next, we will have a wet landing at a huge, crescent-shaped coral sand beach. This paradisiacal bay serves as a refreshment spot for innumerable marine iguanas and sea lions, as well as a strategic place to observe endemic and migratory birds including pintails, oystercatchers, whimbrels, sanderlings, tattlers, lava gulls, blue-footed boobies, frigatebirds, pelicans, herons, and many others.

### PM – Colorado Hill (San Cristobal)

Cerro Colorado Tortoises Protection and Growing Centre is located approximately 40 minutes by bus to the southeast of the island. This centre was built to improve the status of the population of the island tortoises. It includes a large corral, a visitor centre, a breeding centre and an interpretive trail. Along this trail, it is possible to see different species of native and endemic plants as well as birds including the San Cristobal mockingbird, yellow warblers, many species of finches and the Galapagos flycatcher.

## DAY 5 – SATURDAY

### AM – Gardner Bay (Española)

On the north-eastern coast of the island of Española, Gardner Bay offers a wonderful place to refresh in the turquoise sea and to admire the large number of colourful reef fish. You will also have the opportunity to snorkel side by side with green sea turtles, or to enjoy the proximity of the playful Galapagos sea lion. The white sand beach is also an important breeding ground for the green sea turtles. In the crystal-clear ocean, sometimes whales can be sighted under certain circumstances.

### PM – Suarez Point (Española)

This rocky area is home to the most impressive and diverse seabirds of the archipelago. The endangered Galapagos albatross returns to Española (March – December) annually. This allows visitors to admire the balances of pipes and bows (especially in October). Blue-fronted and nazcat oil pipes, black-tailed gulls and red-billed tropic birds are native to this island. Along the southern coast, high cliffs allow spectacular views of ascending birds and the sea water shot through air holes.

## DAY 6 – SUNDAY

### AM – Punta Cormorant & Champion Islet (Floreana)

The peninsula of Cormorant Point forms the extreme north cape of Floreana, which was formed by a number of smaller volcanic cones, covered with tropical dry forest (palo santo). At the landing beach, you will be welcomed by a small Galapagos sea lion-colony. The green sand on this beach contains a high percentage of glassy olivine crystals that have been blown out by the surrounding tuff cones. The ‘flour sand’ beach on the southern side of the peninsula is made up of even finer white coral sand that feels very smooth on your feet. Parrotfish have pulverised it, grinding the calcareous skeletons of living coral. You can spot schools of stingrays who love burying themselves in the sandy bottom. During the first months of the year, Pacific green turtles come ashore to bury their eggs.

This viewpoint was the favourite spot of one of Floreana’s first colonists, the eccentric Baroness and self-proclaimed ‘Empress of Galapagos’ Eloisa von Wagner Bosquet, who even built her house a few metres behind. She and one of her lovers were the first in a series of mysterious disappearings and deaths in the 1930s.

### PM – Post Office Bay (Floreana)

While having lunch we will navigate back to Post Office Bay (about 1hr). Post your holiday greetings in the historical barrel, one of three nearby visitor’s sites on Floreana’s north coast (short displacement, wet landing) and relax. Besides Galapagos sea lions, Pacific green turtles and golden cownose rays you might spot Galapagos penguins! This is the only place in the south-eastern archipelago where penguins reside. Explore by inflatable dinghy – or in your own pace by sea-kayak – another submerged crater rim around the bay of Baroness Lookout. Climb the miniature basaltic cone of Baroness Lookout and take in the paradisiacal coastal views.

## DAY 7 – MONDAY

### AM – Sullivan Bay (Santiago)

The arrival in Sullivan Bay is like a moon landing. The desolate, sprawling fields seem to be mostly lifeless, but this island, which is particularly popular among photographers, still offers a lot to see. There is even some life! Green sea turtles burrow in the small white sand beach, where you can also find crabs, blue herons and oystercatchers.

### PM – Bartolomé

The island of Bartolomé rises 114m above Sullivan Bay. Climb the steps of the Bartolomé Peak Trail and you will be rewarded with panoramic views over volcanic peaks, lunar craters and lava fields. Afterwards you can refresh yourself at the foot of the famous "Pinnacle Rock" and explore the underwater world in the shallow water while snorkelling.

Although there is little vegetation on this island, it has two breathtaking beaches, where sea turtles live. At the foot of the mountain you can also discover a small colony of Galapagos penguins.

## DAY 8 – TUESDAY

### AM – Black Turtle Cove (Santa Cruz)

This small bay is located on the north side of the island of Santa Cruz and offers a unique backdrop for unique adventures. The landscape makes you feel as if you're in the Amazon rainforest rather than near the sea. Explore the quiet emerald lagoon and surrounding shallow bays with the inflatable dinghy. The crystal clear water allows you to spot groups of whitetip reef sharks, blacktip reef sharks, hammerhead sharks, gold rays and spotted eagle rays.

- Transfer to Baltra Airport
